

# Differences between **CLEANING, SANITIZING AND DISINFECTING**

## Cleaning

### REMOVES

**SOIL** from a surface but  
*does not kill* any organisms.

## Sanitizing

### REDUCES

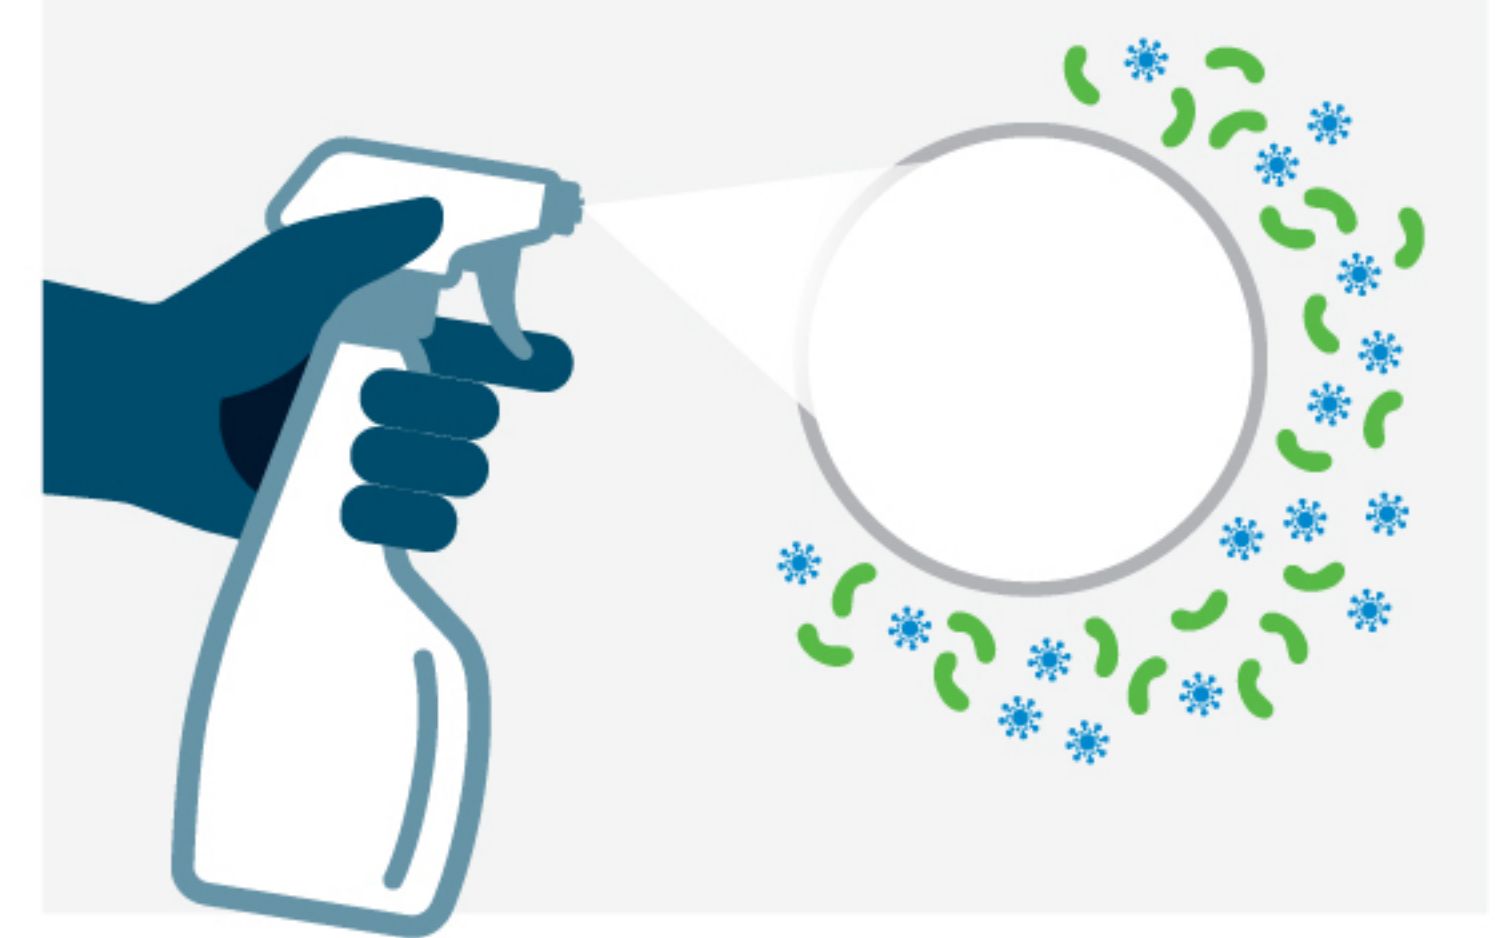

the number of **BACTERIA** in  
the environment, significantly.

## Disinfecting

### DESTROYS

or irreversibly inactivates  
**BACTERIA AND VIRUSES**.\*

Sanitizers and disinfectants are regulated by the U.S. Environmental Protection Agency (EPA) and are used to manage public health risks. It is a violation of Federal law to use these products in a manner inconsistent with labeling.

\*See product label for specific organism claims
